## PROFESSIONAL SUMMARY

Flutter Developer who built and shipped a complete healthtech product end-to-end as Founding Engineer at VisionOptoCare: a multi-app platform (iOS, Android, web) that digitizes eye testing on a smartphone for clinics and everyday users. Skilled in Dart, REST APIs, Firebase, AWS, SQLite, and Provider state management, with a live Play Store app (Buddy). I design the architecture, write and debug the core logic myself, and use AI assistants only to speed up boilerplate and iteration. Seeking a Flutter Developer role where I can contribute to production mobile apps.

## TECHNICAL SKILLS

**Programming:** Dart, SQL, C, C++

**Mobile & Frameworks:** Flutter, Flutter Web, REST APIs, HTTP, Dio, FL Chart, Background Services

**State Management:** Provider, GetX, BLoC

**Backend & Cloud:** Firebase, Firestore, Firebase Cloud Storage, Amazon Web Services (AWS), SQLite, SharedPreferences

**Tools:** Git, GitHub, Android Studio, VS Code, Swagger, Android SDK, AI-Assisted Development (Antigravity, Cursor)

**Spoken Languages:** English (Fluent), Malayalam (Native), Hindi (Conversational), Tamil (Conversational)

## PROFESSIONAL EXPERIENCE

**Flutter Developer (Founding Engineer)**, VisionOptoCare, Mumbai, Maharashtra — Dec 2025 – Oct 2026

- Sole developer of a Flutter healthtech platform that digitizes eye testing using a smartphone, built for both clinics and individual users; the product reached the clinical trial stage
- Built a suite of about 9 connected apps covering 12 eye tests: a subscription app for users, a B2B app for clinics, sales and home-visit eyewear team apps, a doctor web app for consultations, and an eye camp app
- Owned the full lifecycle (requirements, architecture, implementation, testing, release) across Android, iOS, and web from one Flutter codebase
- Built automated diagnostic and report-generation features that turn clinical test data into structured, shareable reports, and integrated REST APIs and Firebase/AWS services for storage, authentication, and remote doctor consultations
- Translated clinical requirements from doctors into features and applied healthcare data security practices to protect patient information
- Made all technical decisions as the only engineer: app architecture, state management, data models, API design, and release process

**Flutter Developer Trainee**, Luminar Technolab, Kochi, Kerala — Jun 2025 – Dec 2025

- Built Flutter apps with clean UI, Provider state management, and REST API integration (HTTP, Dio), following best practices in a team setting

## PROJECTS

**Buddy – Automatic Expense Tracker** (Live on Google Play) — Play Store | GitHub

- Published Android app that reads transaction SMS and UPI notifications through a background listener service and adds expenses automatically, removing manual entry
- Built regex-based parsing to extract amount, sender, UPI ID, and timestamp, with duplicate prevention using notification hashing and time-window checks
- Added daily/weekly/monthly analytics (FL Chart), SQLite offline storage, and PDF export
- **Tech stack:** Flutter, Dart, SQLite, Background Services, FL Chart

**AI-Powered Self-Updating Portfolio** — Live Site

- Flutter Web portfolio that fetches repositories through the GitHub API and generates project summaries using the Google Gemini API
- Stored tokens securely in Firestore (no API keys in code) and scored repositories to feature quality projects
- **Tech stack:** Flutter Web, Firebase, GitHub API, Google Generative AI

## EDUCATION & CERTIFICATIONS

**B.Tech in Computer Science and Engineering**, MES College of Engineering, Kuttippuram — Jun 2021 – Apr 2025

- Certification: Flutter Development Training, Luminar Technolab, Kochi (Dec 2025)
- Coursework: Data Structures, Algorithms, OOP, DBMS, Software Engineering; Class Representative for four years
